Paint your colourful world on the floor!

The Colours Power is full of shapes, lines, dots and colours. Take the pen and just draw! You will find here many interesting graphomotor exercises in which, using interactive pen, you can create a lot of amazing pictures and practice writing letters and digits. The Colours Power apps are rich in creative activities. Paint, draw, write, even with the youngest!

Who is it for?

The Colours Power application collection can complement everyday educational activities for preschool and school children, as well as corrective, compensatory or revalidation classes. It can also make the time spent by children of all ages more attractive in day-care centers, educational institutions, community centers and at home. It is a set of creative exercises aimed at young users of crayons and pens, as well as those slightly older ones who like creative artistic challenges. Exercise sets are prepared for work with one, two or three users.

What are the objectives of these activities?

The applications included in the collection are intended to support the motor skills of children in preschool and early school age. In addition, they support hand-eye coordination, visual perception, logical and creative thinking, as well as linguistic and mathematical competences.

The child's activities are focused on colouring, drawing, connecting points, outlining elements, tracing and mirroring, mapping, as well as creating original art works according to their own idea. The applications offer a wide spectrum of possibilities of using interactive pens in shaping motor skills of children of all ages.

The authors of the package tried to respond to the developmental needs of preschool and school children, focusing primarily on supporting motor and sensory skills during organized and safe games and activities.

What is inside?

The Colours Power includes six applications in which you can find many graphomotor exercises supporting the development of eye-hand coordination.

Thanks to the different levels of difficulty of the tasks, their content can be adapted to the developmental abilities of children. The collection includes applications dedicated to younger children, aged three and four, and applications for children aged five and six, which can also be successfully used by school children.

The worksheet also includes blank, checked and lined sheets.

The applications are a rich collection of exercises including:

- drawing simple shapes,
- colouring elements in the picture,
- drawing along the trace,
- drawing and colouring according to the pattern,
- searching for elements in the picture,
- connecting elements in the picture,
- decorating illustrations with patterns,
- drawing a mirror image,
- shape recognition,
- counting the elements in the illustration,
- writing letters and numbers along the trace,
- creative drawing and painting on a given topic.

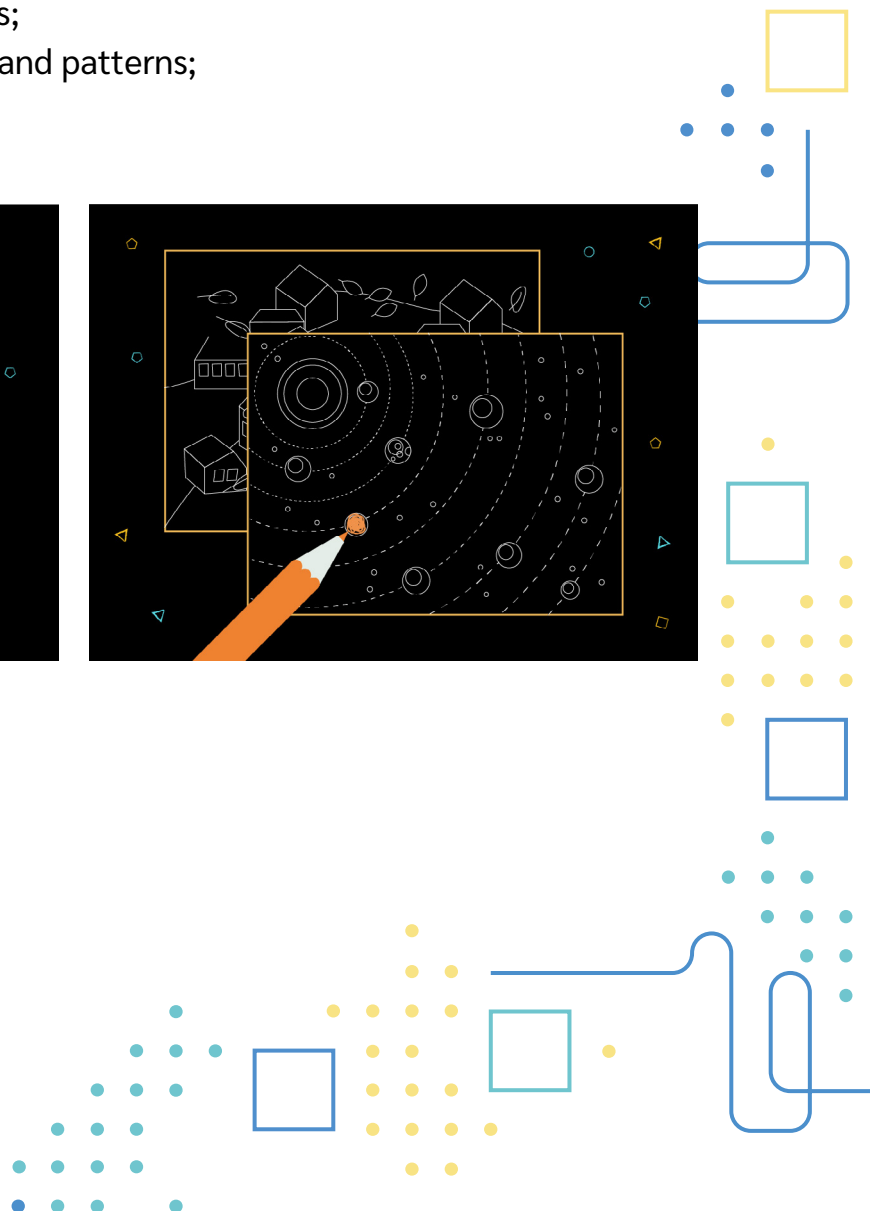

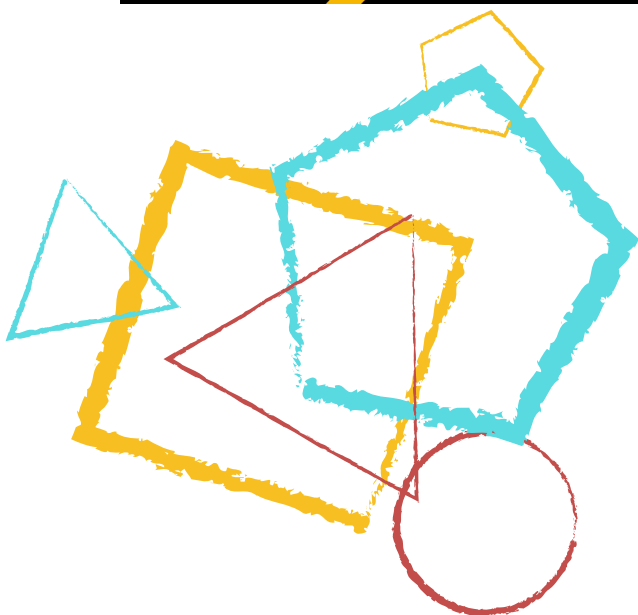

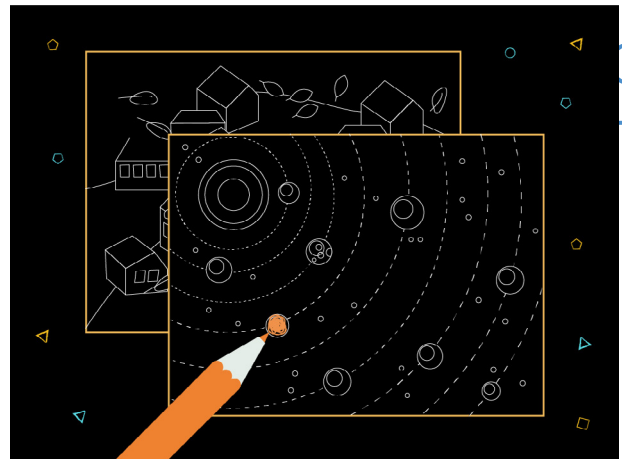

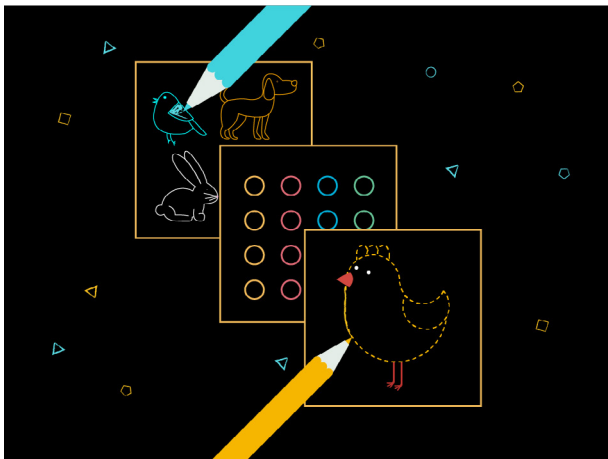

Each work card has a simple instruction, a fragment of an illustration and a toolbox from which the child can choose the colour, thickness and type of pen or the shape of the stamp. In addition to the proposed sets of exercises, there are boards in 3 lines, a grid and a blank drawing block with art tools for individual use. For a high comfort of working with the board, a dark background colour has been selected. Depending on the application, it is possible to work on one, two or three different work cards at the same time. The applications offer a wide spectrum of possibilities of using light pens in shaping motor skills of children of all ages.

Active support for the child's development

The applications included in the package have been developed in cooperation with teachers and psychologists. Interactive games and exercises can perfectly enrich group class scenarios as well as individual exercises.

While working with Colours Power, you can practice:

- fine motor development;
- eye-hand coordination;
- visual perception;
- development of spatial orientation;
- recognition of letters and digits;
- recognition of shapes, colours and patterns;
- creative problem solving.

Fun with the Colours Power on the Motioncube interactive floor
